

# ROBOTS and SPIDERS

Search Engine Robots and Spiders are computers that examine the content of your website, rather than human viewers. For example, when Google, Fire fox, Duck-Duck Go, and Safari... examines your website to index the content, that will be shown as a robot or spider. Robots and Spiders also examine your content to determine your relevancy and placement according to search engine ranking. Search engine ranking is determined by the newest content on your website. Search Engine pull up relevant sites by Utilizing detailed crawl, index, and serving information about your pages, directly from the search engine indexing, examinations and ranking. Basically in order to ensure that arizonapecan.com is brought up as one of the top listings on any search engine We must continue posting new relevant content. If our efforts are stagnant. Then every time someone searches Arizona Pecan Growers Association, someone else's web-page will appear before arizonapecan.com.
